

YOU CAN PRINT MONEY WITH A BLANKE CO ANALYZER

Actual Printout of Before Tune-up Results

The two printouts chart CO concentrations during a fifteen second road test. Up to six tests can be saved before printing. Data is saved for five seconds before the trigger and for ten seconds after the trigger.

Actual Printout of After Tune-up Results

Idle CO and High Idle CO are noted with an arrow and a dotted line for reference on each chart. A properly tuned motorcycle runs best with CO levels between these two lines.
